

**optional
self-repairing
knock-out capability**

The big brother of the RapidRoll® 355

- width up to 7500 mm/height up to 6000 mm
- side frames made from strong dimensioned aluminum profiles
- compact safety protection through pre-running safety photocell, door line photocell; electrical safety contact edge optional
- self-repairing knock-out mechanic capability optional
- optional: additional running wind bars for extreme wind conditions
- self-opening optional
- specially designed model available for use as an exterior protection door in highly explosive environments, ATEX certified.

RapidRoll® 450/600/600G in profile

width:
max. 7500 mm

height:
max. 6000 mm

opening speed:
according to controls up to max. 2.2 m/s

control system:
ACS 50, MCC^{VectorControl}

outer surface side frames:
anodized aluminum

door curtain:
PVC with colored reinforcement strips, durable **RollTex®** fabric, (windows optional)

DOORS WITH FLEXIBLE CURTAINS

RapidRoll® 600

Durable and aesthetic – the door for all areas of industrial application.

RapidRoll® 600 is ideally suited for highly frequented openings and adverse conditions in outside as well as inside areas. The door is weather proof and holds up under extreme loads. It withstands wind ratings of up to class 3 – EN 12424, which is in accordance with wind speed up to hurricane strength.

All door component parts are constructed for heavy loads over a long time span. The door boasts an integrated feather weight balancing system. This system provides for sure opening and closing so that the door curtain remains consistently taut.

In the standard design, the door curtain is made of **RollTex®**, a low-wear and resistant polyester material. The curtain can be fitted with windows. Vision strips, transparent curtains and PVC with colored reinforcement strips can also be selected. The side frames as well as the top roll cover of the door are made of anodized aluminum. On request, a self-repairing knock-out mechanism is available. For safety, the door is equipped with an electric safety contact edge and a door line photocell; a pre-running safety photocell or a multi-beam light barrier are possible.

Door curtain made from weather proof RollTex® fabric with optional windows.

Door curtain made from PVC with blue reinforcement strips, top roll and motor covers.

Door curtain RollTex® fabric without windows with motor and top roll covers.
